**RoyAlloy™ - For the Finest Mold Tooling**

“At my company, American Tool and Mold, Clearwater, Florida USA we strive passionately to build the finest high cavitation injection molds in the world today! The steel we select and use is critical and must also be the finest. Shortly after EDRO’s development and introduction of RoyAlloy™ Stainless in 1996, we recognized the steel had superior qualities compared to all other stainless holder steels available. Since that time we have used RoyAlloy™ exclusively for our mold base tooling.”
