

RoyAlloy™ STAINLESS

“At F&S Tool, Erie, Pennsylvania, we specialize in the production of high cavitation high volume plastic molds. We built a series of molds from 420F stainless that contained thin stripper plates. We had to regularly replace these thin plates because of cracking during production.

Around four years ago after extensive evaluation, we changed to Edro's RoyAlloy™ stainless to replace cracked 420F plates.

We have not had a single RoyAlloy™ plate fail!

RoyAlloy's™ improved mechanical properties have eliminated our reoccurring failures. RoyAlloy™ has cured a major problem and helped us come closer to our goal to provide our customers with the finest tooling available.”

-J.D. Faulkner, VP, Operations
