

Here at männer group following extensive evaluation of the main stainless holder steels available, we have decided to use and specify RoyAlloy as our stainless holder steel

The reason for this decision is as follows:

- Edro GmbH offers unequalled exceptional delivery service, providing custom six side machined plates within a few hours from local stock when required urgently and within 4-5 working days for standard deliveries.
- A large and comprehensive local inventory in gauges from 15mm to 500mm ensures that almost all requirements can be filled immediately ex stock Appenweier.
- RoyAlloy was developed and patented by Edro for Mold Base applications and is characterized by; superior dimensional stability, easier and more consistent machinability, and thus better machined finishes.

Like many other leading mold makers and end users worldwide, our first choice for Stainless Holder Steel at männer group is RoyAlloy from Edro.
