

PLASTIC MOLD STEEL

THE STEEL FOR INNOVATIVE TOOL MAKERS

BÖHLER M261 EXTRA is a **precipitation-hardening steel grade for plastic moulds**, featuring excellent machinability in the as-supplied, i.e. **solution annealed** and **aged**, condition. There is no need for an additional heat treatment, **significantly shortening the throughput time**.

When producing tools from the solution-annealed steel, simple ageing allows strength levels of max. 44 HRC to be achieved without significant changes in dimension or the surface, resulting in a substantial increase in compressive strength and wear resistance.

BÖHLER M261 EXTRA – follows current trends in tool and die-making:

- » Excellent machinability coupled with higher hardness
- » Good dimensional stability
- » Excellent nitriding properties

And in the processing of plastics by offering:

- » High compressive strength
- » High wear resistance

Chemical cor	Chemical composition (%)						
с	Si	Mn	Cr	Ni	Cu	AI	
0.13	0.30	2.00	0.35	3.50	1.20	1.20	+ S

Supplied condition:

Stock standard: precipitation hardened to 38 – 42 HRC alternatively: solution annealed ~30 HRC

BÖHLER

MANIFOLD APPLICABLE

ADVANTAGES

- » no heat treatment required if supplied in the precipitation-hardened condition
- » simple heat treatment if supplied in the solution-annealed condition
- » high hardness of up to 44 HRC after ageing
- » minimum dimensional changes during ageing
- » isotropic mechanical properties
- » excellent machinability in the solution-annealed condition and very satisfactory machinability in the precipitation-hardened condition
- » conditionally weldable
- » suited for gas and bath nitriding treatments to improve the surface wear resistance; no hardness decrease during bath nitriding thanks to high retention of hardness at temperatures up to 570 °C (1058 °F) (low over-ageing tendency); in the solution annealed condition, nitriding and ageing can be carried out in one step
- » suited for chromium plating and for any other type of surface coating
- » high tool life of the tool, therefore reduced downtimes and maintenance costs

APPLICATIONS

- » High-precision plastic injection moulds e.g. for the production of camera parts, electronic parts and household items
- » compression moulds for all types, e.g. for plastic containers
- » moulds for elastomers
- » moulds for the production of sealing rings (O-ring seals)
- » hot runner systems
- » tool holder
